

# Governance Models: Managed vs. Consensus-Based (Fig. 15)

## CONCEPTUAL DIAGRAM

### Managed Monetary System

- Discretionary policy tools
- Central decision authority
- Can respond to crises quickly
- Adaptive to new information

### Bitcoin's Consensus Model

- Requires broad decentralized agreement
- No central decision authority
- Prone to paralysis on contentious changes
- Example: 2015-2017 "Blocksize Wars" split

*Conceptual comparison diagram; not derived from data.*
